SUMMARY

Game developer with a Postgraduate Degree in Game Design from Kingston University and a strong foundation in information technology and software development. Currently shipping live Unity content for a large Arabic-language Android social gaming platform, working across real-time multiplayer networking (Photon), in-game voice and text chat, RTL localization, and gameplay UI. Experienced in building immersive 2D and 3D games in Unity and Unreal Engine, with a track record of rapid prototyping and a habit of shipping a new playable build weekly. Looking for a gameplay or multiplayer programming role where deep systems work and fast iteration both matter.

WORK EXPERIENCE

Game Developer, Dot9 Games, Mumbai, India

06/2026 – Present

Unity / Android · Arabic-language World Cup 2026 social gaming app hosting a hub of real-time multiplayer titles (Baloot, Carrom, Ludo, Arcade Penalty, Brick Breaker and mini-games)

- Delivered **600+ commits in 3 months** to a live Unity Android title, working across multiplayer networking, gameplay logic, editor tooling, localization and UI implementation in a 15-developer codebase.
- **Re-architected 4-player Baloot multiplayer** from pure lockstep to a Master-authoritative action sequencer over four delivery phases, eliminating permanent client state divergence and a split-outcome bug that showed both teams a win and paid match rewards to the losing player.
- Hardened **Photon matchmaking and turn synchronisation** — fixed duplicate room creation, join/retry failures, partial 4-player matches, mid-match stalls and desync timeouts across Baloot, Ludo and Carrom.
- Built **DotNine.Social**, a reusable Unity package for in-game text and voice chat (Photon-backed chat, pluggable voice provider on VideoSDK, ScriptableObject-driven room controller, editor mock for offline testing); integrated it into Carrom and migrated the football title onto the same package.
- Fixed **Arabic RTL rendering across 12+ screens** — shaping text once before display, removing double-shaping and mixed-direction countdowns, and wiring I2 Localization keys for matchmaking, game-over, notification, season-pass and creator flows.
- Implemented and polished large parts of the app's front end: creator/influencer system, history, notifications, leaderboards, settings, season pass, spin wheel, splash and logo animations, pause and game-over screens, and notch-safe layouts.
- Built a Unity **editor tool that registers new mini-games into the hub catalogue**, replacing manual per-title wiring; authored the networking, voice-chat and RTL design and handover documents the team works from.

Data Quality Analyst, Sigma AI, London, United Kingdom

12/2024 – 12/2025

- Ensured 99% dataset accuracy in training data for AI and ML projects across multiple European clients.
- Implemented workflow automations that reduced data processing time by 15% and improved consistency.
- Collaborated with engineers to refine data annotation pipelines, improving model performance metrics.

Game Developer Intern, Caden Games, Mumbai, India

01/2021 – 06/2021

- Engineered 2D and 3D Android games in Unity with a focus on gameplay, physics and user experience.
- Mentored and trained 10 new recruits, resolving queries and easing their integration into the team.
- Integrated Google Ads ahead of publication and tracked app performance post-launch.
- Shipped a new game weekly, building a diverse portfolio through rapid prototyping.

PROJECTS

Dungeon Slash — 3D Grind/Looter RPG (Unity 6, URP, C#)

06/2026 – Present

In-development PC RPG built with one other developer · my scope: player, combat, weapons and enemy

- Built the first-person character controller on Unity's **CharacterController** — sprint and crouch with height blending, jump on custom gravity, and clamped mouse look.
- Implemented the input layer on Unity's **new Input System** behind a single manager that separates held input from pressed-this-frame, plus layer-masked raycast melee wired to animation and **ScriptableObject** weapon stats with quick-slot switching.
- Owned project setup: URP conversion, legacy input removal, a Photon PUN2 to **Fusion** evaluation for the multiplayer layer, Git LFS, and the terrain and baked-lighting pass.

EDUCATION

Postgraduate Degree, Game Design	01/2023 – 02/2024
Kingston University, Kingston upon Thames, England, UK	
Bachelor's Degree, Engineering in Information Technology	08/2018 – 06/2022
A. P. Shah Institute of Technology, Thane, India	

SKILLS

ENGINES	Unity (2D / 3D / UI Toolkit & uGUI), Unreal Engine 5, Unity XR Toolkit
LANGUAGES	C#, Java, Python (Flask)
MULTIPLAYER	Photon PUN2, real-time state synchronisation, authoritative sequencing, matchmaking, desync diagnosis & resync, VideoSDK voice chat
PLATFORM	Android build & release, asset bundles, remote config, Google Ads integration
SYSTEMS	Gameplay mechanics, game state machines, level design, UI/UX implementation, animation, rapid prototyping
LOCALIZATION	I2 Localization, Arabic RTL text shaping & layout
TOOLS	Git & GitHub, Unity Editor tooling, technical design & handover documentation, data quality analysis, workflow automation

LANGUAGES

English — Native · Hindi — Native · Marathi — Native
